

Choice. Independence. Innovation.

Whether you are a travel supplier or buyer, you know the problem. Your agent point of sale can't keep up with new requirements. Attribute-selling and multi-source content are just the tip of the iceberg on your list of technology gaps, and you are introducing costly agent workarounds on a daily basis. To the detriment of productivity and profitability.

Farelogix invites you to change your perspective, and move beyond the limitations of the conventional desktop. We invite you to reclaim control, independence and speed-to-market!

Welcome to Project Hawkeye. Hawkeye is the travel industry's first open-source, web-based travel management point of sale application. Because while no single provider will ever build the perfect agent desktop....we believe a collaborative development community can.

Powered by  FARELOGIX

Product Overview

Rich functionality designed for Total Content

- Optimized shop & book experience.
- Unbundled selling (merchandising) as well as traditional (itinerary-based) sales models.
- Reservation servicing (change, exchange, refund, upgrades, seat assignment and more).
- Normalized profile integration.
- PNR management including support of (but not requirement for) multi-source PNR.
- Easily integrated custom messaging opportunities.
- Destination content-ready including optional partner programs.

Open Source Model

- Free downloads of source code for extension or customization to agency or call center workflow.
- Use product out of the box or customize, extend to fit your business.
- Built on Microsoft .NET using C#.
- No GUI-imposed content constraints.
- Open source community-driven innovation.

Implementation Options

- Hawkeye can be used either with the proprietary FLX platform, or separate from Farelogix if users choose to develop their own connections to travel inventory sources.
- Technical support packages available for purchase (not required).

**Available for
First Public Download
March 26, 2009**
